

## Company Profile:

*Measurement Technologies, Ltd* better known as *mTech* is a USA based manufacturer that provides for the design, manufacture, sales and service for both power and process instrumentation. *mTech* was established in 2000 when the products of the Measurement Products group of Hathaway Process Instrumentation was sold. Specializing and dedicating to the measurement of power parameters and process variables the new company was named Measurement Technologies.

The products of *mTech* are divided primarily into two groups. The first group are products most closely related to the measurement of power parameters and providing that data in either an analog or digital format for use by operators, engineers and maintenance personnel at utilities as well as many other locations where the measurement and analysis of power is required.

The next group of products are used in virtually every type of process plant in the world, these are signal conditioners, transmitters and isolators. Process variables such as temperature, pressure, frequency and AC/DC voltage and current are measured and the gathered information is converted to a linear output and transmitted for use by plant engineers, maintenance personnel and control room operators who have an urgent need to know the status of their plant.

The company operates from modern facilities in suburban Dallas, Texas. *mTech's* products and services are sold through manufacturers representative or agents on a worldwide basis with installations on every continent. Products now bearing the *mTech* name have been sold the world over under such recognized names as Hathaway, Wodex and Promac.

Product certifications and approvals maintained by mTech include CE, UL, cUL, and CSA. Certain products carry a FM certification for hazardous areas including Class I, II and III along with the Ex rating.

## Trade names:

*mTech* Logo and trading name of *Measurement Technologies*, Colleyville, TX, USA. Manufacturing power transducers, signal conditioners and related measurement products, formerly owned and manufactured by Hathaway Process Instrumentation.

*Wodex*            Wodex Technology of Richmond Hill, ON, CANADA, manufacturer of power transducers, now Measurement Technologies

*Promac*           Promac Controls of Scarborough, ON, Canada, manufacturer of signal conditioning, now Measurement Technologies
